PHASE 3 - PRESENT

Project Title

Data-Driven Insights into OLA Ride Bookings using Power BI Dashboard

Project Type

Group Project

1. Introduction

This project focuses on analyzing OLA ride booking data to extract meaningful business insights using Power BI. The dashboard helps understand ride patterns, customer behavior, booking trends, cancellation analysis, revenue generation, and peak booking periods.

The project was developed to transform raw ride booking data into interactive visual dashboards that support data-driven decision-making and improve transportation service efficiency.

2. Problem Addressed

Ride-booking platforms generate large volumes of data every day, making it difficult to manually identify trends and operational issues.

This project addresses challenges such as:

- Understanding customer booking behavior
- Identifying ride cancellation trends
- Monitoring revenue and booking performance
- Detecting peak demand periods
- Improving operational efficiency through analytics

3. Approach Followed

The project followed a structured analytics workflow:

- Data collection and preprocessing
- Data cleaning using Excel/Power BI
- Exploratory Data Analysis (EDA)
- Data transformation using Power Query
- Dashboard creation using Power BI
- Analysis of booking trends, cancellations, and revenue metrics
- Visualization of key performance indicators (KPIs)

4. Key Results

The analysis produced several important findings:

- Peak ride bookings were observed during office hours and weekends
- Certain locations showed higher ride demand consistently
- Cancellation rates impacted overall ride efficiency
- Revenue trends varied across different time periods
- Customer booking behavior patterns helped identify service demand

These results help in understanding performance and identifying areas for improvement.

5. Solution and Contribution

The project provides an interactive Power BI dashboard that includes:

- Ride booking analysis

-
- Revenue monitoring dashboard
 - Cancellation analysis
 - Peak hour and location insights
 - Customer behavior visualization
 - KPI-based performance tracking

The dashboard enables better understanding of ride operations and supports strategic business decisions.
